

# ION EXCHANGE TECHNOLOGY

## ULTIMATE CERAMIC

### ION Paint Protection Packages

The impossible has become a reality by utilizing ION Exchange Technology in Ceramic Pro Next Generation Coatings. ION Exchange is a sophisticated chemical process that allows for a significant increase in the density of a substance.

**The installation of Ceramic Pro ION is a two-step process.**

It begins with the application of Ceramic Pro ION Base. This initial layer of coating forms a permanent bond with Automotive Paint. Once it cures, ION Top Coat is applied to the base.

#### Ceramic Pro™ ION Superior Year Paint Protection
