FEATURES

PROPERTIES

HEAL LITE is a single step, ultra-durable coating that contains up to 60% of the healing capabilities of FEYNLAB's® HEAL PLUS. HEAL LITE was developed with dark paint jobs in mind, especially non-metallic vehicles which easily expose defects such as "spider-web" swirl marks. With HEAL LITE, washing induced marks and other light scratches will quickly recover when the panel is heated by the sun. The mechanism behind the self-healing effect is a memory polymer woven into a ceramic backbone. When heated, the polymer returns to its original state, healing light marring and scratches that have occurred.
