After installation, recommended guidelines

1. After installation of the windshield film, it requires a drying period. The length of this period may vary depending on weather, temperature, and humidity.
2. If exposed to direct sunlight, small water droplets, and slight haziness may appear as the film dries.
3. If it rains after installation, do not use the film until it is completely dried. Also, do not operate the front glass wiper.
4. Do not clean the film for at least 7 days after installation.

* Please consult the installation company for the appropriate drying time for the film.

Recommended maintenance guidelines

1. Install windshield wipers that are silicone type or coated with silicone after installation of ZR Auto / Aato windshield film.
2. Before using the front glass wiper immediately after installation, ensure that the film is completely dry.
3. Apply Tera Shield Windshield Wax to the windshield once after installation and every two weeks thereafter.
4. When cleaning and drying the film surface, always use a clean and soft cloth material.
5. Do not clean the film when it is dry.
6. Avoid using window cleaning products containing ammonia. Do not use solutions containing corrosive substances or solvents.
7. Blow off any snow and then melt any ice build-up on the film surface before operating the front glass wipers. *Do not use plastic ice-scraping tools or nylon snow brushes to attempt to remove ices, as they may scratch the film. Use your front windshield defroster for ~5 min to soften any ice buildup.
8. Do not operate the front glass wiper if there is foreign matter on the wiper in a dry environment.
9. Prevent bird droppings, insects, sand, and other contaminants from sticking to the film and clean them off immediately. If left on, these contaminants can cause the film to become dirty or stained.
